

INSULATED STRUCTURE SOLUTIONS

We offer a unique insulated membrane solution, constructed with double walled vinyl pockets with internal mineral wool insulate filling. Available in either 50mm or 100mm insulation thickness, these membrane solutions offer nominal insulation R-values of R-15 and R-30 respectively. The interior and exterior vinyl PVDF skin is 26oz weight, FR rated and treated for UV protection. Interior and exterior colours can be different allowing an exterior colour for branding or aesthetics with a white interior to maximize brightness and light bounce. Seams at the roof to gable connections are heat welded on-site, ensuring minimal airgaps or thermal breaks. Unlike with many internally hung insulation alternatives, our structure's framework remains accessible internally for rigging of lights, cables, and equipment. These are ideal for heated workspaces, indoor sports complexes and controlled environment agriculture covers.

Please let us know is an insulated structure might be right for your project or application. We welcome the opportunity to discuss how our insulated membrane structures might be the structure solution you're looking for!
